

AOM-230 Advanced Driver Assistance Systems Calibration Accreditation

Part Number: WPTPMAADAS

Duration: 2 days

Protech MOT & Automotive Academy offer Diagnostic training delivered by our Technical Trainers who have extensive knowledge of the Automotive Industry. We offer this training in our fully equipped Calibration and Training Centre, to give your existing technicians the understanding of the different Advanced Driver Assistance Systems that are in use, including their advantages and disadvantages.

Course Content

During the 2-day course at Pro-Tech Academy, candidates will:

- Have an understanding of ADAS Systems and Components
- Understand the importance of ADAS Calibrations and the IIR requirements
- Learn how to maintain and calibrate ADAS Systems
- Gain the IMI AOM230 Accreditation by passing the online and practical assessments

After the course has been completed, candidates will be able to:

- Explain the difference between various ADAS Systems
- Understand why these systems are important
- Enable technicians to set up the calibration area and equipment
- Carry out a re-calibration of the system and issue the correct documentation
- Have assurance that safety systems are operating as intended

Entry Requirements for the ADAS Accreditation (AOM230):

There are no formal entry requirement for this course, however a basic understanding and experience of motor vehicles would be beneficial for some of the modules.

The UK Insurance Industry Requirements (IIR) states that technicians carrying out a calibration must have the IMI AOM230 Accreditation.
